PROFILE

Data Science final-year student skilled in statistics, data analysis, and machine learning Experienced in back-end development with NestJS to build scalable data-driven applications. Certified programming competitor with proven problem-solving and teamwork abilities. Passionate about applying data science to solve real-world problems and deliver actionable insights. Eager to contribute to innovative data science teams and grow technically and professionally.

PROFESSIONAL EXPERIENCE

Backend Developer - Geospatial Division, Q8MAPS

05/2025 – 07/2025

- Developed and maintained geospatial data services and APIs using Laravel and PostgreSQL.

Remote

- Utilized PostGIS to handle spatial queries and geographic data processing
- Collaborated with frontend and GIS teams to integrate interactive, location-based features.

- Focused on clean architecture and scalable backend logic.

- Gained hands-on experience working with real-world spatial datasets and RESTful APIs.

EDUCATION

BSc in Computer and Informatics Engineering (specializing in Data Science & MERN Stack), Syrian Virtual University

01/2021 – Present

Damascus, Syria

Currently pursuing a Bachelor's degree in Computer and Informatics Engineering with a dual focus on Data Science and MERN Stack development. Built multiple academic web applications, including a course management and analytics system inspired by Udemy. Skilled in Python, JavaScript, TypeScript, SQL, and frameworks like Nest/S and React. Practical experience includes developing and deploying machine learning models using Pandas, NumPy, and scikit-learn. Completed a 3-month internship in back-end development and earned a Data Analysis with Python. certificate from Qafza.

SKILLS

Data Science & AI

(Machine Learning | Deep Learning | Statistical Modeling | Data Visualization (Matplotlib, Seaborn) | Data Wrangling & Cleaning

AI/ML Frameworks & Libraries

(TensorFlow | Keras | PyTorch | scikit-learn | XGBoost | Hadoop)) LightGBM)

Back-end Development

(NestJS & Node.js | RESTful APIs | Express.js | Sql Server | MySql PostgreSQL, MongoDB)

Tools

(Git | Github | GitLab | Docker | Postman)

Programming Languages

(Python | TypeScript | JavaScript | C# | C++)

Big Data Tools

(Pandas, NumPy)

Soft Skills

(Problem-solving | Critical Thinking | Collaboration & Teamwork)

LANGUAGES

Arabic

English

Completed the Top Notch course series at Dar Al-Son Institute, reaching Level 8 out of 12

INTERESTS

- Artificial Intelligence
- Machine Learning
- Programming and Coding
- Problem-solving challenges
- Open-source contributions
- competitions

ORGANISATIONS

German-Syrian Research Foundation (DSFG e.V.), <i>IT Support Assistant – SALI Team,</i>	2025 – Present
• Provided technical support to volunteers and project teams, including troubleshooting hardware/software issues. • Managed internal communications and ensured secure handling of sensitive information under the NDA policy. • Assisted in IT setup for projects, including account creation, access management, and documentation. • Supported training sessions and helped team members navigate internal platforms and tools.	

PROJECTS

Advanced Backend System - NestJS, PostgreSQL	04/2025
Designed and implemented a robust backend system using NestJS, supporting user authentication with JWT, role-based access control, and a full product and review management system.	

Integrated email verification, password reset, and image upload functionalities. Utilized PostgreSQL with TypeORM, implemented API documentation via Swagger, and applied end-to-end testing using Supertest. Focused on secure, scalable architecture and clean code practices

TSP Project01/2025

Developed a Flask-based API to optimize truck delivery routes by integrating Dijkstra's Algorithm, Dynamic Programming for the Traveling Salesman Problem (TSP), and a Genetic Algorithm for global optimization. The system intelligently distributes packages across trucks while minimizing travel distance and respecting weight constraints. This project demonstrates advanced algorithmic problem-solving applied to real-world logistics challenges, aiming to improve efficiency and reduce costs.

E-commerce Web Application (NestJS, PostgreSQL)08/2024

Developed a scalable e-commerce backend system using NestJS, implementing services for user authentication, product management, order processing, and review handling, Integrated JWT for secure login, TypeORM for database operations, and PostgreSQL for data storage. Key features include search and filter functionality, stock management, and role-based access. Applied clean architecture and environment configuration with dotenv for maintainability

CERTIFICATES

- Completed Level 8 of the Top Notch course series at Dar Al-Son Institute
 - programming competition
- Data Analysis with Python - Qafzah Tech
 - Analytic Data & SQL Certificate
- Machine Learning and Deep Learning - Qafza Tech
